

Popular as Tabelas SQL

Para popular as tabelas em SQL foram usados dois scripts escritos em Python, foi usado um script chamado de `bs4_population.py` que é responsável por ir buscar nomes de atletas a páginas web com listas de nomes de atletas olímpicos e modalidades oficiais de atletismo. E o script `db_populate.py` que é responsável por manipular todos os dados e gerar código SQL responsável pela população da base de dados. Este código é guardado num ficheiro designado por `db_populate.sql`.

Este comando irá gerar dois ficheiros de texto (`atletas.txt` e `modalidades.txt`) com dados necessários para executar o script `db_populate.py` :

```
> python bs4_population.py
```

De seguida, o script `db_populate.py` :

```
> python db_populate.py
```

```

No final da execução dos dois script ficamos com um ficheiro `db_populate.sql` pronto a ser executado e dessa forma populando a nossa base de dados.
